

1.

1.1 หน้าจอแสดงข้อมูลในตาราง

Employee List

Customer ID	Title	Description
1	Akriss	England
2	Sarina	Jolee
3	Cristofer	Balane

1.2 ค้นหาจาก ID

Film JSP Hibernate Example!

Employee Search Form

Enter Employee ID: 1

Film ID	1
Film Title	Akriss
Film Description	England

2.

2.1 ค้นหาจากข้อความ โดยใช้ LIKE

Using Hib... Tanawat0... Facebook... 140-390... twenty... JSP Page... JSP Page... localhost... JSP Page... localhost...

localhost:8080/Web/faces/AddActorController?empid=4&firstname=abc&lastname=Thailand&AddActor=Submit

add new actor

Add actors

could not execute statement

Employee ID : Firstname: Address:

Search by name:

Windows taskbar: EN 2:32 7/11/2559

2.2 ผลลัพธ์การค้นหา

Using Hib... Tanawat0... Facebook... 140-390... twenty... JSP Page... JSP Page... localhost... JSP Page... localhost...

localhost:8080/Web/faces/ActorList.jsp

Employee List

not null 1

Employee ID	Employee Name	Address
4	abc	Thailand

Windows taskbar: EN 2:33 7/11/2559

2.3 Insert ข้อมูล

Add Employee

Employee ID : Firstname: Address:

Search by name:

2.4 ผลลัพธ์การ Insert

Employee List

Customer ID	Title	Description
1	Akrits	England
2	Sarina	Jolee
3	Cristofer	Balane
4	abc	Thailand
5	ter	Thailand
6	aaaa	ggg
7	Tanawat	Thailand

3. โครงสร้างข้อมูลในตาราง และ ตัวอย่างข้อมูลในตาราง และ โครงสร้าง Table มี Attribute Empid , Empname และ Address

#	EMPID	EMPNAME	ADDRESS
1		1 Akrits	England
2		2 Sarina	Jolee
3		3 Cristtofer	Balane

4. ไฟล์ตาราง Model table เป็นไฟล์ class java

package Employeee;

public class Employee implements java.io.Serializable {

private int empid;

private String empname;

private String address;

public Employee() {
}

public Employee(int empid) {
 this.empid = empid;
}

public Employee(int empid, String empname, String address) {
 this.empid = empid;
 this.empname = empname;
 this.address = address;

```

    }

    Employee(String empid, String firstname, String lastname) {
        throw new UnsupportedOperationException("Not supported yet."); //To
change body of generated methods, choose Tools | Templates.
    }

    public int getEmpid() {
        return this.empid;
    }

    public void setEmpid(int empid) {
        this.empid = empid;
    }

    public String getEmpname() {
        return this.empname;
    }

    public void setEmpname(String empname) {
        this.empname = empname;
    }

    public String getAddress() {
        return this.address;
    }

    public void setAddress(String address) {
        this.address = address;
    }
}

```

5. โค้ดไฟล์ Hibernate.cfg.xml

```
<?xml version="1.0" encoding="UTF-8"?>

<!DOCTYPE hibernate-configuration PUBLIC "-//Hibernate/Hibernate
Configuration DTD 3.0//EN" "http://hibernate.sourceforge.net/hibernate-
configuration-3.0.dtd">

<hibernate-configuration>

    <session-factory>

        <property
name="hibernate.dialect">org.hibernate.dialect.DerbyDialect</property>

        <property
name="hibernate.connection.driver_class">org.apache.derby.jdbc.ClientDriver</
property>

        <property
name="hibernate.connection.url">jdbc:derby://localhost:1527/Employee</prop
erty>

        <property name="hibernate.connection.username">root</property>
        <property name="hibernate.connection.password">1234</property>
        <property
name="hibernate.current_session_context_class">thread</property>

        <property name="hibernate.show_sql">true</property>

        <property
name="hibernate.query.factory_class">org.hibernate.hql.internal.classic.ClassicQ
ueryTranslatorFactory</property>

        <mapping resource="Employeeee/Salary.hbm.xml"/>
        <mapping resource="Employeeee/Employee.hbm.xml"/>

    </session-factory>

</hibernate-configuration>
```

6. โค้ดไฟล์ servlet สำหรับการ ShowList Employee

6.1 Servlet สำหรับการ showsit employy

6.1.1 Servlet ชื่อ Empservice โดยมี method ชื่อ getEmployee()

```
import java.io.IOException;

import java.io.PrintWriter;

import java.util.ArrayList;

import java.util.List;

import javax.servlet.ServletException;

import javax.servlet.http.HttpServlet;

import javax.servlet.http.HttpServletRequest;

import javax.servlet.http.HttpServletResponse;

import org.hibernate.Query;

import org.hibernate.Session;

import org.hibernate.Transaction;

public class EmpService extends HttpServlet {

    public List getEmployee() {

        List EmployeeList = null;

        Session session = null;

        try {

            session =

NewHibernateUtil.getSessionFactory().openSession();

            org.hibernate.Transaction tx =

session.beginTransaction();

            Query q = session.createQuery("from Employee");

            EmployeeList = (List<Employee>) q.list();

        } catch (Exception e) {

            e.printStackTrace();

        }

    }

}
```

```

    }

    return EmployeeList;
}

protected void processRequest(HttpServletRequest request,
HttpServletResponse response)

    throws ServletException, IOException {
response.setContentType("text/html;charset=UTF-8");

    try (PrintWriter out = response.getWriter()) {

        /* TODO output your page here. You may use
following sample code. */
out.println("<!DOCTYPE html>");
out.println("<html>");
out.println("<head>");
out.println("<title>Servlet FilmServlet</title>");
out.println("</head>");
out.println("<body>");
out.println("<h1>Servlet FilmServlet at " +
request.getContextPath() + "</h1>");
out.println("</body>");
out.println("</html>");

    }

}

// <editor-fold defaultstate="collapsed" desc="HttpServlet
methods. Click on the + sign on the left to edit the code.">

/**

 * Handles the HTTP <code>GET</code> method.

 *

 * @param request servlet request

```

```

    * @param response servlet response
    * @throws ServletException if a servlet-specific error occurs
    * @throws IOException if an I/O error occurs
    */

    @Override
    protected void doGet(HttpServletRequest request,
        HttpServletResponse response)

     * @throws IOException if an I/O error occurs
     */
    @Override
    protected void doPost(HttpServletRequest request,
        HttpServletResponse response)
        throws ServletException, IOException {
        processRequest(request, response);
    }

    /**
     * Returns a short description of the servlet.
     *

```

```

        * @return a String containing servlet description
    */

    @Override
    public String getServletInfo() {
        return "Short description";
    } // </editor-fold>

}

```

6.1.2 Servlet ชื่อ Listcontrollet

```

/*
 * To change this license header, choose License Headers in
 * Project Properties.
 * To change this template file, choose Tools | Templates
 * and open the template in the editor.
 */

package Employeee;

import java.io.IOException;
import java.io.PrintWriter;
import java.util.List;
import javax.servlet.RequestDispatcher;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import javax.servlet.http.HttpSession;

/**
 *
 */

```

```

* @author AsusX
*/

public class Listcontroller extends HttpServlet {

    protected void processRequest(HttpServletRequest request,
    HttpServletResponse response)

        throws ServletException, IOException {
        response.setContentType("text/html;charset=UTF-8");
        try (PrintWriter out = response.getWriter()) {

            // Create a session object if it is already not created.
            HttpSession session = request.getSession(true);

            try {

                EmpService cs = new EmpService();
                List EmployeeList = cs.getEmployee();
                // intnum = filmList.size();
                session.setAttribute("listResult", EmployeeList);

            } catch (Exception e) {
                e.printStackTrace();
            }

            RequestDispatcher rd =
request.getRequestDispatcher("ShowList.jsp");
            rd.forward(request, response);

        }

```

```

    }

// <editor-fold defaultstate="collapsed" desc="HttpServlet
methods. Click on the + sign on the left to edit the code.">

/**
 * Handles the HTTP <code>GET</code> method.
 *
 * @param request servlet request
 * @param response servlet response
 * @throws ServletException if a servlet-specific error occurs
 * @throws IOException if an I/O error occurs
 */

@Override
protected void doGet(HttpServletRequest request,
HttpServletResponse response)
    throws ServletException, IOException {
    processRequest(request, response);
}

@Override
protected void doPost(HttpServletRequest request,
HttpServletResponse response)
    throws ServletException, IOException {
    processRequest(request, response);
}

/**
 * Returns a short description of the servlet.
 *

```

```

        * @return a String containing servlet description
        */

@Override
public String getServletInfo() {
    return "Short description";
} // </editor-fold>

}

```

6.2 สร้างไฟล์ Servlet สำหรับการ Search By ID

6.2.1 เพิ่ม Method เข้าไปใน EmpService ชื่อ method ว่า

```

SearchEmployee()

public Employee searchEmployee(short search_EmpId)
{
    String message=null;
    Session session=null;
    Transaction tx = null;
    Employee Emp = null;
    try {

session=NewHibernateUtil.getSessionFactory().openSession();

        tx = session.getTransaction();
        tx.begin();

        Query query = session.createQuery("from
Employee where empid="+search_EmpId);
        Emp = (Employee)query.uniqueResult();
        tx.commit();
    } catch (Exception e) {
        if (tx != null) {
            tx.rollback();
        }
    }
}

```

```

        e.printStackTrace();
    } finally {
        session.close();
    }
    return Emp;
}

```

6.2.2 สร้าง Servlet ชื่อ SearchController สำหรับการ Search

```

/*
 * To change this license header, choose License Headers in
Project Properties.
 * To change this template file, choose Tools | Templates
 * and open the template in the editor.
 */

```

```
package Employeee;
```

```

import java.io.IOException;
import java.io.PrintWriter;
import javax.servlet.RequestDispatcher;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import javax.servlet.http.HttpSession;

```

```
public class SearchController extends HttpServlet {
```

```

    protected void processRequest(HttpServletRequest request,
HttpServletResponse response)
        throws ServletException, IOException {

```

```

response.setContentType("text/html;charset=UTF-8");
try (PrintWriter out = response.getWriter()) {

    // Create a session object if it is already not created.
    HttpSession session = request.getSession(true);

    try {

        short search_EmpId =
Short.parseShort(request.getParameter("searchValue"));

        EmpService acs = new EmpService();
        Employee Emp_obj =
acs.searchEmployee(search_EmpId);

        session.setAttribute("searchResult", Emp_obj);

        RequestDispatcher rd =
request.getRequestDispatcher("Employee.jsp");
        rd.forward(request, response);

    } finally {
        out.close();
    }
}

// <editor-fold defaultstate="collapsed" desc="HttpServlet
methods. Click on the + sign on the left to edit the code.">
/**

```

```

    * Handles the HTTP <code>GET</code> method.
    *
    * @param request servlet request
    * @param response servlet response
    * @throws ServletException if a servlet-specific error occurs
    * @throws IOException if an I/O error occurs
    */
    @Override
    protected void doGet(HttpServletRequest request,
        HttpServletResponse response)
        throws ServletException, IOException {
        processRequest(request, response);
    }

    /**
    * Handles the HTTP <code>POST</code> method.
    *
    * @param request servlet request
    * @param response servlet response
    * @throws ServletException if a servlet-specific error occurs
    * @throws IOException if an I/O error occurs
    */
    @Override
    protected void doPost(HttpServletRequest request,
        HttpServletResponse response)
        throws ServletException, IOException {
        processRequest(request, response);
    }

```

```

/**
 * Returns a short description of the servlet.
 *
 * @return a String containing servlet description
 */
@Override
public String getServletInfo() {
    return "Short description";
} // </editor-fold>

}

```

6.3 สร้างไฟล์ Servlet สำหรับการ Search By Name

6.3.1 สร้าง Servlet ชื่อ ActorService สำหรับการ Search By Name โดยมี Method ว่า SearchActorByName

```

package Employeee;

import java.io.IOException;
import java.io.PrintWriter;
import java.util.List;
import javax.servlet.ServletException;
import javax.servlet.http.HttpServlet;
import javax.servlet.http.HttpServletRequest;
import javax.servlet.http.HttpServletResponse;
import org.hibernate.Query;
import org.hibernate.Session;
import org.hibernate.Transaction;

public class ActorService extends HttpServlet {

```

```

public List searchActorByName(String searchKeyword) {
    List EmployeeList = null;
    Session session = null;
    try {
        session =
NewHibernateUtil.getSessionFactory().openSession();
        org.hibernate.Transaction tx =
session.beginTransaction();
        Query query = session.createQuery("from Employee
where Empname like :keyword ");
        query.setParameter("keyword", "%" + searchKeyword
+ "%");
        EmployeeList = (List<Employee>) query.list();
    } catch (Exception e) {
        e.printStackTrace();
    }
    return EmployeeList;
}

```

```

protected void processRequest(HttpServletRequest request,
HttpServletResponse response)
    throws ServletException, IOException {
    response.setContentType("text/html;charset=UTF-8");
    try (PrintWriter out = response.getWriter()) {
        /* TODO output your page here. You may use
following sample code. */
        out.println("<!DOCTYPE html>");
        out.println("<html>");

```

```

        out.println("<head>");
        out.println("<title>Servlet ActorService</title>");
        out.println("</head>");
        out.println("<body>");
        out.println("<h1>Servlet ActorService at " +
request.getContextPath() + "</h1>");
        out.println("</body>");
        out.println("</html>");
    }
}

// <editor-fold defaultstate="collapsed" desc="HttpServlet
methods. Click on the + sign on the left to edit the code.">
/**
 * Handles the HTTP <code>GET</code> method.
 *
 * @param request servlet request
 * @param response servlet response
 * @throws ServletException if a servlet-specific error occurs
 * @throws IOException if an I/O error occurs
 */
@Override
protected void doGet(HttpServletRequest request,
HttpServletResponse response)
    throws ServletException, IOException {
    processRequest(request, response);
}

/**

```

```

    * Handles the HTTP <code>POST</code> method.
    *
    * @param request servlet request
    * @param response servlet response
    * @throws ServletException if a servlet-specific error occurs
    * @throws IOException if an I/O error occurs
    */
    @Override
    protected void doPost(HttpServletRequest request,
        HttpServletResponse response)
        throws ServletException, IOException {
        processRequest(request, response);
    }

    /**
     * Returns a short description of the servlet.
     *
     * @return a String containing servlet description
     */
    @Override
    public String getServletInfo() {
        return "Short description";
    } // </editor-fold>
}

```

6.3.2 สร้าง Servlet ชื่อ SerachActorController

```

/*
 * To change this license header, choose License Headers in
 * Project Properties.

```

* To change this template file, choose Tools | Templates
* and open the template in the editor.

*/

package Employee;

import java.io.IOException;

import java.io.PrintWriter;

import java.util.List;

import javax.servlet.RequestDispatcher;

import javax.servlet.ServletException;

import javax.servlet.http.HttpServlet;

import javax.servlet.http.HttpServletRequest;

import javax.servlet.http.HttpServletResponse;

import javax.servlet.http.HttpSession;

/**

*

* @author AsusX

*/

public class SearchActorController extends HttpServlet {

protected void processRequest(HttpServletRequest request,

HttpServletResponse response)

throws ServletException, IOException {

response.setContentType("text/html;charset=UTF-8");

try (PrintWriter out = response.getWriter()) {

// Create a session object if it is already not created.

HttpSession session = request.getSession(true);

```

        try {
            String searchValue =
request.getParameter("searchValue");

            ActorService acs = new ActorService();

            List EmployeeList =
acs.searchActorByName(searchValue);

            int num = EmployeeList.size();

            session.setAttribute("EmployeeListResult",
EmployeeList);

        } catch (Exception e) {
            e.printStackTrace();
        }

        RequestDispatcher rd =
request.getRequestDispatcher("ActorList.jsp");

        rd.forward(request, response);
    }
}

```

```

// <editor-fold defaultstate="collapsed" desc="HttpServlet
methods. Click on the + sign on the left to edit the code.">

```

```

/**

```

```

 * Handles the HTTP <code>GET</code> method.

```

```

 *

```

```

 * @param request servlet request

```

```

 * @param response servlet response

```

```

    * @throws ServletException if a servlet-specific error occurs
    * @throws IOException if an I/O error occurs
    */

    @Override
    protected void doGet(HttpServletRequest request,
        HttpServletResponse response)
        throws ServletException, IOException {
        processRequest(request, response);
    }

    /**
     * Handles the HTTP <code>POST</code> method.
     *
     * @param request servlet request
     * @param response servlet response
     * @throws ServletException if a servlet-specific error occurs
     * @throws IOException if an I/O error occurs
     */
    @Override
    protected void doPost(HttpServletRequest request,
        HttpServletResponse response)
        throws ServletException, IOException {
        processRequest(request, response);
    }

    /**
     * Returns a short description of the servlet.
     *
     * @return a String containing servlet description

```

```

        */

@Override
public String getServletInfo() {
    return "Short description";
} // </editor-fold>

}

```

6.4 สร้างไฟล์ Servlet สำหรับการ Add Employee

6.4.1 เพิ่ม Method ชื่อว่า AddActor() ลงไปในไฟล์ Servlet ที่ชื่อว่า

ActoerService

```

public String addActor(Employee employee) {
    String message = null;
    Session session = null;
    try {
        session=
NewHibernateUtil.getSessionFactory().openSession();
        Transaction tx = session.getTransaction();
        tx.begin();
        session.save(employee);
        tx.commit();
        message = "Saved Data";
        return message;
    } catch (Exception e) {

        return (e.getMessage());
    } finally {
        session.close();
    }
}

```

6.4.2 สร้างไฟล์ servlet ที่ชื่อว่า AddActorController

```
/*  
    * To change this license header, choose License Headers in  
    Project Properties.  
    * To change this template file, choose Tools | Templates  
    * and open the template in the editor.  
*/  
  
package Employeee;  
  
  
import java.io.IOException;  
import java.io.PrintWriter;  
import java.util.Date;  
import javax.servlet.RequestDispatcher;  
import javax.servlet.ServletException;  
import javax.servlet.http.HttpServlet;  
import javax.servlet.http.HttpServletRequest;  
import javax.servlet.http.HttpServletResponse;  
import javax.servlet.http.HttpSession;  
  
  
/**  
    *  
    * @author AsusX  
    */  
  
public class AddActorController extends HttpServlet {  
  
    protected void processRequest(HttpServletRequest request,  
        HttpServletResponse response)  
        throws ServletException, IOException {  
        response.setContentType("text/html;charset=UTF-8");  

```

```

try (PrintWriter out = response.getWriter()) {
    out.println("add new actor");
    HttpSession session = request.getSession(true);

    String empid = request.getParameter("empid");
    int empidd=Integer.parseInt(empid);
    String firstname = request.getParameter("firstname");
    String lastname = request.getParameter("lastname");

    Employee ac = new Employee(empidd,firstname,
lastname);
    //ac.setFirstName(firstname);
    //ac.setLastName(lastname);

    ActorService acs = new ActorService();
    String resultMessage = acs.addActor(ac);

    RequestDispatcher rd =
request.getRequestDispatcher("Actor.jsp?message=" +
resultMessage
    );
    request.setAttribute("searchResult", null);
    rd.forward(request, response);
}
}

// <editor-fold defaultstate="collapsed" desc="HttpServlet
methods. Click on the + sign on the left to edit the code.">
/**

```

```

    * Handles the HTTP <code>GET</code> method.

        HttpServletResponse response)
        throws ServletException, IOException {
        processRequest(request, response);
    }

```

```

/**
 * Returns a short description of the servlet.
 *
 * @return a String containing servlet description
 */
@Override
public String getServletInfo() {
    return "Short description";
} // </editor-fold>

}

```

7. สร้างไฟล์ JSP สำหรับ run แต่ละหน้า

7.1 สร้างไฟล์ jsp สำหรับหน้า ShowList Employee ชื่อว่า ShowList.jsp

```

<%--
    Document   : ShowList
    Created on : Nov 6, 2016, 11:37:02 PM
    Author    : AsusX
--%>

<%@page import="Employeee.Employee"%>
<%@page import="java.util.List"%>
<%@page import="java.util.List"%>
<%@page contentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>

<html>
<head>
<meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
<title>JSP Page</title>
</head>

```

```

<body>
<h1>Employee List</h1>

<%
    try {

        List<Employee>EmployeeList = (List<Employee>)
session.getAttribute("listResult");

        if (EmployeeList != null) {
            //  out.println("not null");
            //  out.println(filmList.size());

        }
    }
%>
<table border="1">

<tbody>
<tr>
<td>Customer ID</td>
<td>Title</td>
<td>Description</td>

```

7.2 สร้างไฟล์ jsp สำหรับหน้า Search Employee By ID ชื่อว่า Employee.jsp

```

<%--
    Document    : Employee
    Created on  : Nov 7, 2016, 12:01:36 AM
    Author      : AsusX
--%>

<%@page import="Employeee.Employee"%>
<%@page contentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>

```

```

<head>
<meta http-equiv="Content-Type" content="text/html; charset=UTF-8">
<title>JSP Page</title>
</head>
<body>
<h1>Film JSP Hibernate Example!</h1>
<div style="background-color: #FFBBCC; width:100%;">
<br />
<h2>Employee Search Form</h2>
<form name="searchForm" action="SearchController">
    Enter Employee ID:<input type="text" name="searchValue"
value="" >
<input type="submit" value="Find Film Details" name="searchButton" />
</form>

<%
    try {
        // Create a session object if it is already not created.
        Employee acc = (Employee)
session.getAttribute("searchResult");

        if (acc != null) {
%>

<table border="1">

<tbody>
<tr>

```

```

<td>Film ID</td>
<td><% out.println(acc.getEmpid()); %></td>
</tr>
<tr>
<td>Film Title</td>
<td><% out.println(acc.getEmpname()); %></td>
</tr>
<tr>
<td>Film Description</td>
<td><% out.println(acc.getAddress()); %></td>
</tr>

</tbody>
</table>

<%
        }

    } catch (Exception e) {
out.println(e.getMessage());
    }

%>

</body>
</html>

```

7.3 สร้างไฟล์ jsp สำหรับหน้า Search Employee By Name ชื่อว่า ActorList.jsp

```
<%--
    Document    : ActorList
    Created on  : Nov 7, 2016, 12:28:09 AM
    Author      : AsusX
--%>

<%@page import="Employeee.Employee"%>
<%@page import="java.util.List"%>
<%@page contentType="text/html" pageEncoding="UTF-8"%>
<!DOCTYPE html>
<html>
    <head>
        <meta http-equiv="Content-Type" content="text/html;
            charset=UTF-8">
        <title>JSP Page</title>
    </head>
    <body>
        <h1>Employee List</h1>
        <%
            try {
                List<Employee> EmployeeList = (List<Employee>)
session.getAttribute("EmployeeListResult");
                if (EmployeeList != null) {
                    out.println("not null");
                    out.println(EmployeeList.size());
                }
            } catch (Exception e) {
                out.println(e.getMessage());
            }
        %>
        <table border="1">
```

```

<tbody>
  <tr>
    <td>Employee ID</td>

    <td>Employee Name</td>
